I. DOGS, CATS AND FERRETS

In order to bring their dogs, cats and ferrets from the United States or Canada into France, travelers must abide by the following conditions. The rules for the two countries are identical, except for the agency that must certify the health certificates.

If you possess a valid EU pet passport for your dog, cat, or ferret, the following steps are not required (see section on EU pet passports below)

- The animal must be at least 12 weeks old.
- Every animal must be identified by a microchip (standard ISO 11784 or annex A ISO standard 11785) or a tattoo. In case of identification with a tattoo, the tattoo must have been applied before July 2011 and remain clearly readable.
  - If the microchip standard is different from standard ISO 11784 or annex A ISO standard 11785, you must bring your own scanner in order to read the microchip.
- Every animal must have a valid rabies vaccination. If it is the first rabies vaccination for the pet, you must wait 21 days between the last shot of the vaccination protocol and departure.
  - A revaccination (booster) must be considered a primary vaccination if it was not carried out within the period of validity of a previous vaccination.
- Any rabies vaccination prior to micro chipping is considered non-valid.
  - If your dog, cat or ferret has been vaccinated before being fitted with a microchip, the animal will have to be vaccinated again after the microchip is inserted. You must wait at least 21 days between the completion of the vaccination protocol (the same as for a primary vaccination) and the departure date, even if the animal was vaccinated before the micro chipping.
- A blood test for rabies antibody titration is not required for animals coming from Canada and the United States (including Puerto Rico, the US Virgin Islands, Guam, American Samoa, and the Northern Mariana Islands).
- Blood tests are not required for animals coming from the following countries as well:
  - Andorra, Antigua and Barbuda, Argentina, Aruba, Australia, Bahrain, Barbados, Belarus, Bermuda, Bosnia and Herzegovina, Chile, Curacao, United Arab Emirates, Fiji, Hong Kong, Ascension Island, BES islands (Bonaire, St. Eustatius and Saba), Cayman Islands, Falkland Islands, Faroe Islands, British Virgin islands, Greenland, Gibraltar, Wallis and Futuna, Iceland, Jamaica, Japan, Liechtenstein, Macedonia (Former Yugoslav Republic of Macedonia), Malaysia, Mauritius, Mexico, Monaco, Montserrat, Norway, New Caledonia, New Zealand, French Polynesia, Russia, St Kitts and Nevis, St Helena, St Lucia, San Marino, St. Martin (the Dutch part), St Pierre and Miquelon St Vincent and the Grenadines, Singapore, Switzerland, Taiwan, Trinidad and Tobago, State of the Vatican City, Vanuatu.
- If transiting through a country where the blood test is required (country not listed above), the owner or the authorized person must provide a declaration certifying that, during the transit, the animals had no contact with any animals of species susceptible to rabies and remained secured within the means of transportation or within the perimeter of the international airport.
- Please see the declaration form below:

TRANSIT DECLARATION
- IF YOU ARE BRINGING 5 ANIMALS OR LESS, please use the following certificate (Annex IV of EU decision 577/2013):

**CERTIFICATE ONE – DOGS, CATS, and FERRETS (5 OR LESS)**

- **In the United States**, the official health certificate will be issued by veterinarians and endorsed by the United States Department of Agriculture (USDA) Animal and Plant Health Inspection Service (APHIS). USDA endorsement is required for all certificates except those issued by military veterinarians for dogs, cats and ferrets. Please check the list of USDA Offices.
  - The list of regional USDA-APHIS Area Offices of Veterinary Services may be consulted at the following URL address: https://www.aphis.usda.gov/animal_health/downloads/nies_contacts/sc.pdf
- **In Canada**, the official health certificate will be issued by veterinarians and endorsed by the Canadian Food Inspection Agency’s (CFIA) Animal Health Offices. Please check the list of regional animal health offices:
  - The list of CFIA Animal Health Offices may be consulted at the following address: http://www.inspection.gc.ca/animals/terrestrial-animals/offices/eng/1300462382369/1300462438912
- The official health certificate will be valid for 10 days, from the date of endorsement until the date of arrival at the EU point of entry. For maritime travel, the 10-day window is extended for a period equal to the duration of the maritime voyage.

The certificate is also valid for the purpose of further movements within the EU for a total of **4 months** from its date of issue or until the date of expiration of the rabies vaccination, whichever date is earlier.

The owner or authorized person should accompany his animal during a non-commercial movement. Nevertheless, the movement of an animal travelling 5 days before or after the owner or authorized person is accepted with the presentation of a justifying document (boarding pass, plane ticket, etc.). The following declaration document should be completed and presented:

**DECLARATION TWO – OWNER NOT PRESENT AT ARRIVAL**

You may also use the following certificate if you are bringing more than 5 animals, but under the following conditions:

The non-commercial movement of these animals concerns competitions, exhibitions, sporting events or training for the purpose of these events.

The owner or authorized person submits written proof that these animals are registered, either for the participation in one of the aforementioned events or registered by their organizing association.

The animals must be more than 6 months old.

- IF YOU ARE BRINGING MORE THAN 5 ANIMALS (for private, non-commercial purposes), and IF YOU MEET THE REQUIREMENTS DESCRIBED ABOVE, please use the two following certificates (Annex I of EU regulation 2013/519):
FAQ ON EU PET PASSPORTS:

What is an EU Pet Passport?

- An EU Pet Passport is a document issued by an official veterinarian in a European Union Member State that contains official health information related to a specific pet (for dogs, cats and ferrets only).
- An EU Pet Passport cannot be obtained in the U.S.
- The purpose of the pet passport is to simplify travel between EU member states, but the EU has also allowed it to be used for pets returning to the EU from other countries.

If your pet has an EU Pet Passport, what documents are needed to return to France?

- If the rabies vaccination recorded in the EU Pet Passport is still valid and was recorded by an EU veterinarian, your pet will only need the EU Pet Passport to travel back to France.
- If the rabies vaccination recorded in the EU Pet Passport has expired and your pet requires revaccination in the U.S. or was already revaccinated while in the U.S., you will need to obtain a health certificate issued by a USDA Accredited Veterinarian before your pet leaves the U.S. by following the instructions above. You will need to follow the steps for dogs, cats, and ferrets that do not have an EU Pet Passport.

Does my pet require a clinical examination in the U.S. before returning to France?

- Pets returning to France with a valid EU Pet Passport do NOT need a clinical examination.

SPECIAL CASES:

- Dogs considered as dangerous:

  Importing into any French territory any dog resembling the following breeds, based on their morphology, is forbidden: Staffordshire terrier, American Staffordshire terrier (pitbulls), Mastiff (boerbulls) and Tosa.

  However, importing to any French territory of any dog of the following breeds: Staffordshire terrier, American Staffordshire terrier (pitbulls), and Tosa, registered by the American Kennel Club, as well as dogs related to Rottweilers, is possible, under special rules. These special rules make travelling with these breeds for short periods extremely difficult, if not impossible.

- Assistance dogs:
Assistance dogs are subject to the exact same requirements as all other pet dogs. No special exceptions will be made.

PENALTIES FOR NON-COMPLIANCE:

If the above-mentioned health requirements are not complied with, the officials in charge of checks can, at the owner’s expense, have the animal sent back to the country of origin, have it put into quarantine or have it euthanized, pursuant to Articles L.236-9 and L.236-10 of the French rural and maritime fishing code (code rural et de la pêche maritime).

Failure to observe the regulations and thereby causing or contributing to the involuntary spreading of transmissible diseases in domestic or wild vertebrates may result in a fine of €300,000 and two years in prison.

Moreover, if the failure to observe the requirements set out in Article L.236-9 has had a serious effect on human or animal health the penalties are increased to five years in prison and a fine of €600,000. There are additional penalties for natural people or legal entities.

II. DOMESTIC PET RODENTS, REPTILES, AND ORNAMENTAL FISH

You may bring into France a maximum of 5 domestic rodents, pet reptiles, or ornamental fish per family for non-commercial purposes (not intended for sale). An accompanying document (in French and English), issued no later than ten days prior to arrival into France by a national licensed veterinarian of the country of export must accompany the rodent, reptile, or ornamental fish. Please use the following certificate.

Domestic pet rodents, reptiles and ornamental fish

III. PET BIRDS

WARNING: The EU regulations regarding the movements of pet birds have been modified in response to the avian influenza alert (bird flu). The regulations below remain applicable until further instructions.

Pet birds may be brought to France solely under the following conditions:

1. Each family is limited to 5 birds;
2. ONE of the following three conditions must be fulfilled:
   a. Each bird must have been isolated for 30 days prior to export in the place of departure (applies to both the United States and Canada)
b. Each bird must have been vaccinated, and at least on one occasion re-vaccinated, against avian influenza using an H5 and H7 vaccine approved for the species concerned in accordance with manufacturer instructions; the bird must have been vaccinated within the last six months and no later than 60 days prior to departure from the U.S. or Canada;

OR

c. Each bird must have been in isolation for at least 10 days before departure and must have undergone a PCR test to detect the H5 and H7 virus with a negative result carried out on a sample taken no earlier than the third day of isolation.

AND

The birds must be transferred to a private residence within the European Union and may not be introduced to a group of birds during the 30 days following entry.

3. Compliance with the above conditions must be certified by an official veterinarian in accordance with the approved model certificates. USDA (for the United States) or CFIA (for Canada) endorsement is required for all certificates.

a. In the United States, the official health certificate will be issued by veterinarians and endorsed by the United States Department of Agriculture (USDA) Animal and Plant Health Inspection Service (APHIS). USDA endorsement is required for all certificates. Please check the list of USDA Offices.

i. The list of regional USDA-APHIS Area Offices of Veterinary Services may be consulted at the following URL address:

b. In Canada, the official health certificate will be issued by veterinarians and endorsed by the Canadian Food Inspection Agency’s (CFIA) Animal Health Offices. Please check the list of regional animal health offices:

i. The list of CFIA Animal Health Offices may be consulted at the following address:
   http://www.inspection.gc.ca/animals/terrestrial-animals/offices/eng/1300462382369/1300462438912

The documents linked below provide an English and French version of the same approved model certificate. Both versions must be completed and signed by the competent authorities in the US or Canada. The French version will be requested by the French authorities upon arrival in France.

   Birds - English version

   Birds - French version

WARNING:

Many birds are registered as endangered species according to the Washington Convention. In such case, a specific permit is required in the country of departure and in the country of arrival. Please check our page on endangered species.
Please note that until further instructions are given, commercial movements into the European Union of live birds are strictly forbidden.

IV. OTHER SPECIES

For other pets than those mentioned in I to III above or pets listed in I to IV above but intended to be exported to France in greater quantities than those allowed for under the regulations, please call the agriculture department: 1 202 944 6361.

WARNING:

[*France is party to the Convention on International Trade in Endangered Species of Wild Fauna and Flora. International trade in species listed by the Convention is unlawful unless authorized by permit. This includes, for example, wild birds, reptiles, crustaceans, fish as well as any part or product (such as skins, feathers, eggs) and products and articles manufactured from wildlife and fish. Permits to export from Canada or re-export certificates are issued by Environment Canada (Convention Administrator - Canadian Wildlife Service - Ottawa - ON K1A 0H3). Permits to export from the US or re-export certificates are issued by the US Fish and Wildlife Service (Office of Management Authority - Department of the Interior - Washington, DC 20240). Permits to import into France are issued by the Ministère de l’aménagement du territoire et de l’environnement (direction de la nature et des paysages - sous-direction de la chasse, de la faune et de la flore sauvages - bureau des échanges internationaux d’espèces protégées - 20, avenue de Ségur 75302 Paris 07 SP - France).]*
